1 What is Bluetooth?

1.1 Features of Bluetooth

- Objectives of Bluetooth : To Realize Wireless Communication for Short Distance with Low Power Consumption, High Reliability, and Low Cost.
- Frequency in Use: To Use ISM(Industrial, Scientific, Medical) Band which does not require any permission to use.
 - 2.400 2.4835 GHz, 79 channels
 - 2.465 2.4835 GHz, 23 channels (in France)
- Transmission Rate : 1Mbps ~ 3Mbps
- Transmission Output : 1mW (10m, Class2), 100mW (100m Class1)
- Network Configuration : Configured with Master and Slave relation. A Bluetooth unit shall allow simultaneous connections up to 7 devices (in case of ACL).
- Reliability : To Guarantee stable wireless communication even under severe noisy environment through adopting the technique of FHSS (Frequency Hopping Spread Spectrum).

1.2 Operation of Bluetooth

<Feature 1-1 Bluetooth Operation>

- Bluetooth operates based on the connection between "Master" and "Slave".
- Masters are simply supposed to do "Inquiry" and "Page". Slaves are supposed to do "Inquiry Scan" and "Page Scan".
- If a Master finds a Slave and so "inquiry" is successful, a Slave responds to the Master with its information.
- Interconnection between the Master and the Slave is achieved only if the information from the Slave is corresponded with the Master, and the Slave sends data to the Master.

2 Products Overview

FB100AS has been developed to replace the previous RS232 Cable system with wireless communication system to use.

Major Features of FB100AS

- 1. Bluetooth Specification 2.0 Support
- 2. Bluetooth Piconets (Point to Multipoint) are configurable up to (max. 1:7).
- 3. Easy to control communication speed by using DIP Switch. (2400 bps 230400bps)
- 4. Support AT Command, and capable to control FB100AS by using AT Command.
- 5. Easy to connect to use with Bluetooth PDA, Bluetooth USB Dongle, etc.
- 6. Selectable Power Supply between D-Sub 9 pin Connector and USB Connector
- 7. Stable Data Transmission / Receipt
- 8. Simply support the function of Bluetooth Firmware Update

***** We request the new users of FB100AS to read the information on this description carefully before they start to use the products.

3 PRODUCT COMPONENTS

3.1 Basic Components of FB100AS

MODEL	PICTURE	Q'TY (EA)
FB100AS (RS-232 Serial Adapter)	FB100AS CO	1
FCA100UC (USB Power Cable)		1
FCA004DA (4dBi Dipole Antenna)		1
CD (Operation Manual and Test Program)		1

<Table 3-1 Basic Components of FB100AS>

※ If you find any of above components is defective, or not included in the package, please contact the seller you purchased.

4 Product Appearance

<Figure 4-1 Details and Dimension of FB100AS>

5 Interface 5.1 FB100AS Interface

<Figure 5-1 D-SUB 9 Pin Connector>

PIN NO.	NAME OF SIGNAL	FUNTION	INPUT/OUTPUT DIRECTION
1	CONNECT_CHECK	1:N - Connect Check	Output
2	DCD TX	1:1 - Data Carrier DetectTransfer DataData output	Output
3	RX	Received Data Data Input	Input
4	STREAM_CONTROL DSR	1:N - Stream Control 1:1 - Data Set Ready	Input
5	GND	Ground	
6	STREAM_STATUS DTR	1:N - Stream Status 1:1 - Data Terminal Ready	Output
7	MESSAGE_CONTROL CTS	1:N - Message Control 1:1 - Clear To Send	Input
8	MESSAGE_STATUS RTS	1:N - Message Status 1:1 - UART Ready To Send	Output
9	VCC	Power (DC 4 ~ 12V)	Input

<Table 5-1 Features of D-SUB 9 Signals>

% The power can be supplied through pin number 9.

5.2 Pin Connection

5.2.1 Connection Diagram with Flow Control

<Figure 5-2 FB100AS Connection Diagram with Flow Control>

5.2.2 Connection Diagram without Flow Control

<Figure 5-3 FB100AS Connection Diagram without Flow Control>

5.2.3 Connection Diagram with 1:N Function

<Figure 5-4 Connection Diagram with 1:N Function>

Note :

If Flow Control is not required, communication can be achieved with only RX, TX, and GND connected to the Host.

For 1:N communication, connection of STREAM CONTROL(DSR) and STREAM STATUS(DTR) are necessarily required. MESSAGE CONTROL(CTS) and MESSAGE STATUS(RTS) is used for the confirmation of the accurate information.

In 1:N communication, if all connection is successful, CONNECT CHECK(DCD) in SLAVE Device is outputted HIGH signal. However, if one or more of connections is disconnected, CONNECT CHECK(DCD) in SLAVE will be outputted LOW signal. (Default CONNECT CHECK(DCD) Output : LOW)

6 Features of Dip Switch

<Figure 6-1 FB100AS Dip Switch View>

Switch 1Switch 2(Function)(Baudrate)

<Figure 6-2 Features of Dip Switch>

SW	FEATURES	ON	OFF	BASIC SET
1	Selectable Power Supply	0 N KHS42 2 1 2 3 4	0 N KHS42 1 2 3 4	ON
		D-SUB Power Supply or USB Power Supply	USB Power Supply	
2	None	-	-	OFF
3	ROLE		ON K IS 12 ⁸ ⁹ 1 2 3 4	OFF
		MASTER	SLAVE

6.1 Dip Switch 1 (FUNCTION Switch)

<Table 6-1 Features of FUNCTION Switch>

Note :

If you push a Reset Switch when a Dip Switch is turned ON in a PC Configuration Mode, the products return to the status of FATORY RESET.

6.2 Dip Switch 2 (Baud Rate Switch)

115200bps

19200bps

230400bps

6.3 Initial Set Value of Dip Switch

ТҮРЕ	Function Switch	Baud Rate Switch
FB100AS		ON KIIS42 ⁸⁰ 1 2 3 4

<Figure 6-3 Transmission Rate>

<Table 6-2 Initial Set Value of Dip Switch>

If the initial value is not consistent with <Figure 6-3>, please contact the seller you purchased the product.

Note :

If the CONNECTION MODE of PC Configuration is MODE4 (AT command MODE), it shall operate based on the Baud rate and at the value of Role established in PC configuration, regardless of setting of Baud rate and Role of Dip Switch.

7 Power Indicator LED / Status LED

<Figure 7-1 Appearance of FB100AS>

FB100AS has a red Power LED and green and red Status LED. Please, refer to the following description.

LED TYPE	STATUS	DESCRIPTION
Power Indicator LED (Power LED)	Power Input	The Red Light Turns on
	Connecting to Bluetooth	Green LED is Flickering
Status Indicator LED (Status LED)	Connected to Bluetooth	Green LED turned on
	PC Configuration	Red LED is Flickering

<Table 7-1 Operation Check by LED Status>

Note :

If you a Reset Switch when a red Status LED flickers in a PC configuration Mode, the products return to the status of FACTORY RESET.

8 Performance of Product

No.	F	Part	Specification
1	Bluetooth Spec.		Bluetooth Specification 2.1 Support
2	Communication dis	stance	100 M
3	Frequency Range		2.4 GHz ISM Band
4	Sensitivity		-83dBm (Typical)
5	Transmit Power		11 dBm(Typical)
6	Size		66 x 31 mm
7	Support Bluetooth Profile		SPP (Serial Port Profile)
8	Input Power		4 ~ 12V
9	Current Consumption		100 mA (Max)
10	- .	Operating	-20°C ~ 50°C
10	Temperature	Limit Operating	-30℃ ~ 80℃
11	Communication Speed		2,400bps – 230,400bps
12	Antenna		4 dBi
13	Interface		9 pin D-SUB Female (RS232)
14	Flow Control		RTS, CTS, DTR, DSR support

<Table 8-1 Performance of FB100AS>

9 Current Consumption

STATUS		Current Consumption (mA)			
		MIN	MAX	AVG	
Standby		24	30	27

Page scan (Slave)		24	33	28	
Inquiry (Master)		77	86	82	
	Slave	39	45	43	
Connected	Master	27	33	29	
	Slave	51	57	54	
Data transmission	Master	48	57	52	
	Slave	48	54	50	
Data reception	Master	45	54	49	
	Slave	51	57	54	
Data transmission / reception	Master	51	60	55	
	Slave	24	33	25	
Power save	Master	21	33	27	

<Table 9-1 Current Consumption of FB100AS>

TEST CONDITIONS

Baud rate : 9600 bps, Input Voltage : DC 5V

The power consumption is subject to change depending on the transmission rate and volume of data.

10 Initial Set Value of Products

The product has the initial Set Value as shown on the <Table 10-1>. Please be sure to identify the initial Set Value, before you begin to use.

ТҮРЕ	Set Values
Device Name	FB100v1.0
Pin Code (Pass key)	BTWIN
Uart (baud rate-data bit-parity bit-stop bit)	9600-8-N-1
ROLE	SLAVE
Connection Mode	MODE3
Operation Mode	MODE0 (1:1 communication)
Debug Char	0x02

<Table 10-1 Initial Set Values of FB100AS>

The Operating Set Values of Products is changeable by using Dip Switch or PC software (Window Hyper Terminal, or FIRMTECH PC Configuration Program.)

Note :

Please refer to 12 PC Configuration for details on changing the setting.

11 Connecting the wireless section of Bluetooth

In order for Bluetooth devices to transmit data to each other, the wireless section of Bluetooth should be connected to each other. To connect the wireless section, you should set each role for each device, one for a **MASTER**, another for a **SLAVE**. It takes about 1~10 sec that a Master is connected to a Slave. How to connect the wireless section of FB100AS can be performed with 2 significant ways.

****** We will use 2 FB100AS and MS Windows in describing procedures.

11.1 Connecting with Connection WIZARD

- (1) Connect FB100AS(1) to a Serial port of PC, and turn the power on.
- (2) Execute C-Wizard Program.

<Figure 11-1 Connection Wizard Step 1>

(3) Click FIRMTECH SLAVE Set-up button (<Figure 11-1> Blue borders)

FIRMTECH SLAVE	Firmtech Bluetooth Pro	duct - SLAVE Setup
HARDING	r NOTE	
	Prepare the Bluetooth Device (SPP)	
	Follow below step.	
****	1. Connect the Bluetooth Device to PC Serial Port.	
FIRMTECH MASTER	(Do not turn on other Bluetooth Device to PC Senai Port. (Do not turn on other Bluetooth Device!!)	
	2. Power the Bluetooth Device on.

<Figure 11-6 Connection Wizard Step 6>

- (10) If the Status Display of Procedures (<Figure 11-6> N.1 red borders) turns red into green,
 Connection Set-up is completed. With Clicking the End button(<Figure 11-6> Blue borders), finish the C-Wizard
- (11) Set Function Dip Switch #3 to MASTER after turn off the power of FB100AS(2)'s power off.
- (12) Turn ON the FB100AS(2) and check status LED of FB100AS(2) is turns ON in 1~10seconds. If LED is ON, the section of Bluetooth is connected properly and Data Transmission is usable

11.2 How to connect with Dip Switch Set-up

FB100AS can perform data communication once you change the Dip Switch Set-up.

The following is the method of setting the Dip Switch.

- (1) Set Baud rate Dip Switch of FB100AS(1) to the proper speed for communication
- (2) Set FUNCTION Dip Switch #3 of FB100AS(1) to **SLAVE**.
- (3) Turn the power of FB100AS(1) on.
- (4) Set Baud rate Dip Switch of FB100AS(2) to the proper speed for communication.
- (5) Set FUNCTION Dip Switch #3 of FB100AS(2) to MASTER.
- (6) Turn the power of FB100AS(2) ON.
- (7) If Status LED of FB100AS is turned on shortly, it means the wireless section of Bluetooth is properly connected, so Data transmission can be performed.

12 How to complete PC Configuration?

The Baud rate or Role is selectable using Dip Switch. (In case, CONNECTION MODE is not MODE4.)

For other setting values, you can establish the setting using PC Configuration.

PC Configuration can be performed with two significant ways.

First way is to use Configuration tool provided by FIRMTECH Co., Ltd.

Second is to use the serial communication programs such as Hyper Terminal or Mincom provided by OS. To set these are shown below.

12.1 PC Configuration using BTConfig tool

- (1) After setting 4th Switch (PC Configuration Switch) of Function Dip Switch FB100AS ON and connect the power. Check if red LED is flickers on Status LED.
- (2) Execute BTConfig tool after connect FB100AS to serial port of PC.

<Figure 12-1 BTConfig tool initialization>

(3) Click "SERIAL OPEN" button. (<Figure 12-1> blue borders)

💐 BT Configuration	n Program Ver	1.3			•

1 BLUETOOTH PARAMETERS: Set-up Group Button

2 Set-up window: change Set-up Groups and values

- **1 READ button**: read set values. (During first initialization, value should be READ after BTConfig tools are connected to products)
- 2 WRITE button: Save set values. (Serial port is automatically off after saving is completely.)

3 INIT button: Reset all the set values to Factory fix points.

<Figure 12-4 BTConfig tool Set-up>

- (6) If you select any PARAMETERS(<Figure 12-4> red borders N.1), the window for Value Check and Set-up comes up on the right
- (7) Save the set values by clicking the WRITE button after Set-up completed.

1 WRITE PARAMETERS: Save the currently set values.

2 RETURN TO READ: Set to the initial value.

<Figure 12-5 BTConfig tool WRITE>

Note:

Please refer to the *appendix A* of PC Configuration for the further descriptions.

12.2 PC Configuration using Serial Communication (Hyper Terminal)

Program

12.2.1 To Execute Hyper Terminal

To set up PC Configuration using Hyper Terminal, following procedures shall be performed prior to the power is being supplied after the FB100AS is connected to the PC.

To set up PC Configuration, the Serial Communication Program is required. We will use Hyper Terminal in describing the procedures.

(1) Fix the number 4 switch of Function Dip Switch at ON.

Connection Description			?	x

<Figure 12-10 Hyper Terminal Set Up Window 5>

- (6) As shown on <Figure 12-10>, Check "Echo typed characters locally" and come out pressing the acknowledge button. Now the Hyper Terminal program setting procedure is completed to use PC Configuration.
- (7) If the Power is approved for FB100AS, the menu such as <Figure 12-11> will appear on the Hyper Terminal.

=====================================
======================================
[Back Spcae : Input data Cancel] [t : Move top menu]
Select(1 ~ 5) > _

<Figure 12-11 Pc Configuration Menu>

12.2.2 How to Use PC Configuration Menu

The user may select the menu to change by selecting the given number in front of the left end menu. For example : To change "DEVICE NAME", enter : [1]→[Enter]

Note :

When Reset Button is pressed at <Figure 12-11>, all the set up value shall be reset to the initial set up status (factory fix point).

Following is the order to use the menu.

- (1) The execution will only be executed by pressing the "Enter" key.
- (2) The small character "t" will always move to be positioned at upper side of the menu.
- (3) To move menu, use the number in the end of left side. Please be sure to "Enter" key upon completion of input.
- (4) " \leftarrow " key is used to delete the entered character currently.
- (5) If the entered character is unreadable or is not supported at the appropriate menu, "Retry >" message will be output.
- (6) If the input message is more than 12 characters, "Overflow buffer" message will be output and then "Retry >" message appeared as well.

Upon completion of PC Configuration setting up, turn off the FB100AS, and change the Function Dip Switch #4 (PC configuration) to OFF position and turn the power ON, which will start the Bluetooth to operate normally.

Note :

Please refer to the Appendix A, details of PC Configuration for detailed value description of PC Configuration.

13 Approval Information 13.1 KCC

13.2 FCC compliance Information

This device complies with part 15 of FCC Rules. Operation is subject to the following two conditions:

- 1. This device may not cause harmful interference received.
- 2. This device must accept any interference received.

Including interference that may cause undesired operation.

FCC WARNING

This equipment may generate or use radio frequency energy. Changes or modifications to this Equipment may cause harmful interference unless the modifications are expressly approved in the instruction manual. The user could lose the authority to operate this equipment if an unauthorized change or modification is made.

This equipment has been tested and found to comply with the limits for a class B digital device, pursuant to Part 15 of the Federal Communication Commission(FCC) rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and , if not installed and used in accordance with the instructions, may cause harmful interference to radio communication. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures. Reorient or relocate the receiving antenna. Increase the separation between the equipment and the receiver. Connect the equipment into an outlet on a circuit different from that to which the receiver is connected Consult the dealer or an experienced radio/television technician for help.

A separation between the user's the antenna be at least 20cm and a prohibition that it can not Be co-located with other transmitter.
